

## 1. Lee's Software Company

## 2. Pseudo Code

```
//import package to for scanner user input.  
    // Class for holding shoes.  
        // Class for shirts array extend items & mehtod for exit message.  
// Main class for output.  
    // controls do while loop menu selction  
        // do while loop  
// Decalre method  
    // Holds user input for menu selction  
    // input for purchases  
    // shoe inventory  
    // Object created for user input  
// Menu & Name of program  
    // Output message  
    // Get User input and output choice  
    // Ask user for input selction  
        // output user selction  
// shoe & item selction  
  
// menu optios using switch statments  
    // option number 1  
    // case allows user to buy items from LeeX inverntory  
        // for loop to output multi dimensial array.  
        // Object decalaration  
        // User Input for itmem.
```

```
// option number 2
// case 2 allows user to sell items listed
// option number 3
// case 3 allows user to exit program.
```

### **3. Documentation of Program**

The purpose of my program is to help Sneaker/clothing resellers to help sell and buy for their business while also allowing them to make their business better by incorporating. The function of the program will allow the seller to list what shoes he has in stock for his own Sneaker/Clothing inventory ranging from many pairs of sneakers ranging from major brands such as Nike, Jordan, Adidas, Yeezy, and many more. As well as Clothing from Bape , Supreme, and KITH. The business function will allow the seller to better keep track of his prices and stock, then he will be better off sticking to his prices and not budging like you would selling without some type of program similar to Stock, Goat, and Stadium Goods. Then the technical functions would be that it would allow customers to buy sold out items that they missed out for a premium. Then selling would allow customers to sell their items that have hype behind them such as sold out sneakers Such as Royal Toe 1's , Travis Scott 1's, Cactus Jack 4's and withing a DS (deadstock) and or VND (very near deadstock) etc. This program will be a alpha of LeeX later on I may take this and work on it later more in depth to change things up

4. Business Type **Clothing retailer / Shoe Boutique** (LeeX).
